

PLASTERER EQUIPMENT COMPANY, INC.

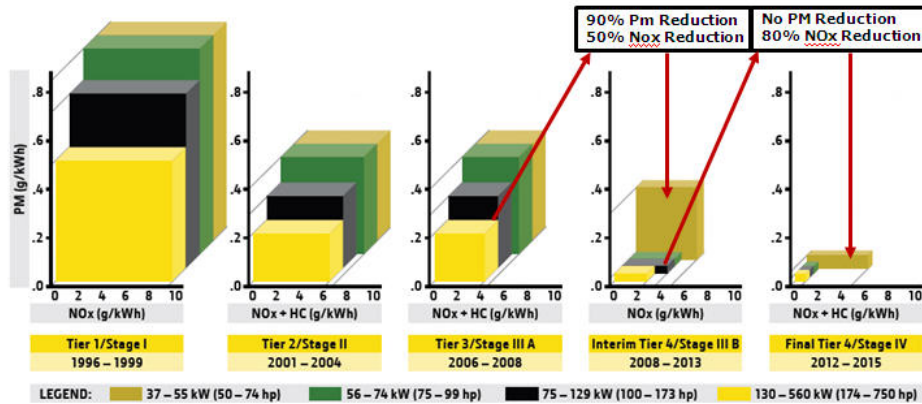

Regulations, emissions, and fuel quality, treatment, and handling are just a few of the many issues that will affect us in 2010 and beyond. It is our goal to be a solution provider and information source on this critical topic. Proper fuel quality, treatment, and handling alone will save you needless downtime.

Learning what you need to know about emissions is not easy. Plasterer Equipment is conducting an Emissions 101 Webinar to assist you in complying with these new and ever-changing regulations. Why a webinar? Frankly, we believe this is the most cost effective means to provide solutions based training for our customers

The Clean Air Act – New Nonroad Engines

PM and NO_x Reduction with Tier Levels

NON ROAD (US) 3500 ppm SULFUR → <500 ppm June 2007 | <.015% or 15 ppm-ULSD Mandate June 2010

You are cordially invited to attend a webinar *at either a 10:00 AM or 2:00 PM session. All you will need to attend is a computer with speakers and a microphone ----all in the comfort of your own office.

If you would consider participating in this event, please provide the following information via email to dnolt@plasterer.com or fax to 273-5928. You will receive an email invitation and setup instructions for your computer, along with contact information for any technical difficulties you may encounter.
